## Fall Outage Season

The Fall Outage Season is upon us again. This is the time of year when necessary repairs are made to plants in order to maintain proper functionality and to ensure that the best possible utility deliverance can be provided throughout the busy winter months.

Outage repairs play an important role in the overall performance of a plant, and not just general repair work. A seasonal outage is essential for many reasons, but most importantly for detection of the unknown. The unknown factors generally begin as low level problems but if left unattended could turn into emergencies.

Faces of Bremco.....4

# The Next Millennium of Welders

Over the years in business, Bremco, Inc. has employed, and still does employ, many talented individuals. To this day Bremco has been able to meet our customers' needs with these individuals and watch them flourish and grow into the experienced craft people they are today. With this, Bremco has had the pleasure of experiencing firsthand the skill, craftsmanship, dedication, and eagerness to succeed, that many of these employees have exerted on behalf of Bremco.

Today Bremco is increasing involvement with the up-and-coming welders from multiple community/technical colleges in New Hampshire and Maine. The success rate of the students attending these colleges has proven to be highly successful. Bremco has weld tested a number of graduates from these schools and most, if not all, have shown their talent in just a matter of a few hours. The proof being the success of passing their weld test coupon.

## **SAFETY:**

Bremco takes pride in practicing safe work habits at all times. In this industry there is simply no room for error when it comes to safety in the workplace. This year Bremco has been awarded the Platinum Step Award from Associated Builders and Contractors, Inc. because of our efforts in developing and maintaining a quality safety program.

## **QUALITY CONTROL(CODE):**

Congratulations to Deane Hartford for passing his exam and obtaining his CWI (Certified Welding Inspector) License! Deane was featured in our July 2013 Newsletter.

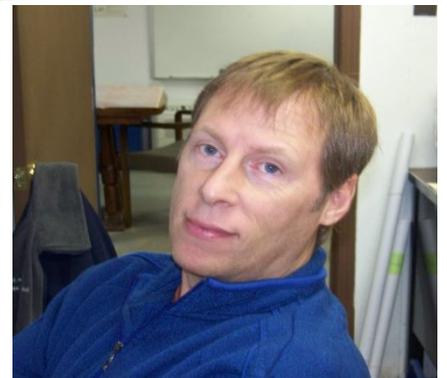

# Meet the Faces of Bremco

Dan O'Gara is our QA/QC Manager. He joined Bremco as a code quality welder with many years of experience, both in the field, as well as numerous shop oriented functions. Because of his background, he was the obvious candidate to move into the Code Department where his enthusiasm and diligent work ethics have proven invaluable. We all find him a pleasure to work with which is so important as he is the watch dog for all of Bremco's code commitments. This is not always a comfortable position, but his big smile makes it a whole lot more bearable as he holds our feet to the fire.

Mike Roberts is our Safety Manager. He first came to us as a field supervisor having extensive background in our business. Having worked in the insulation/asbestos removal business in varying degrees, safety was a very important piece of his experience, this making him a natural fit for Bremco's needs as Safety Manager. Mike has done a great job identifying our responsibility to fit into the different site specific safety programs of our wide exposure customer base. Many of our jobs require extremely close monitoring because of the proximity to hazardous conditions.

Gary Martin has provided a high level of quality regarding code welding, whether it be pipe, tubes, or structural. This supports our level of expectation by our customer base that is simply priceless. Gary is now providing a mentor system for our newer welders coming into the program so that we can continue to provide the level of quality that is so important to all of our customers. With Gary setting the way for the welders, we can feel confident that our future welders will be providing the same level of quality we have become recognized for.
